TOP 75+ JAVA INTERVIEW QUESTIONS EXPERIENCED

1. Have you used any in-memory databases?
2. How are you testing your application?
3. How are you writing your Apache Kafka test cases?
4. How are you managing logging in your application? Which version of Log4j do you use?
5. There was a Log4j issue recently. What was that?
6. How do you detect a deadlock in your code?
7. What are different ways to create a thread, and which one is better?
8. What is locking in terms of threads?
9. What is the difference between `sleep()` and `wait()`?
10. Have you used the Executor framework?
11. How will you detect a memory leak in your application?
12. How are you implementing disaster recovery in your project?
13. How does Service Discovery and Registration work?
14. How is client-side load balancing different from server-side load balancing?
15. Does server-side load balancing cause a single point of failure?

TOP 75+ JAVA INTERVIEW QUESTIONS EXPERIENCED

16. What is a Binary Tree?
17. How are you writing database-related test cases? How do you mock those?
18. Do you have experience working with in-memory databases?
19. Can you explain mappings in Hibernate?
20. Difference between Map and FlatMap?
21. Suppose there is a password in a properties file. How can you hide it?
22. What are the reasons for memory leaks in Java?
23. How does service communication happen in your application?
24. Have you set up Kafka?
25. Your producer is generating 100 records per second, but the consumer is consuming 20 records per second. How will you handle this scenario?
26. Starvation vs Deadlock in Java Threads?
27. What are the best practices to prevent deadlocks?
28. Why is Stream faster than Iterator?
29. What is the use of service discovery or service registry?
30. What is a Reentrant Lock?

TOP 75+ JAVA INTERVIEW QUESTIONS EXPERIENCED

31. In which scenarios have you written a Singleton class?
32. What is a JWT token and what does it contain?
33. What are different types of authentication?
34. How do you authorize users? How do you understand that a user has a particular role?
35. Are you aware of stateless and stateful services?
36. What are the best practices you follow to maintain code quality?
37. How to handle exceptions in REST services?
38. Difference between intermediate vs terminal methods in Java 8?
39. Suppose an Employee entity has 50 variables. How would you design constructors to avoid parameter confusion?
40. Suppose there is a restriction that we should not modify the class. In this scenario, which is suitable: `Comparator` or `Comparable`?
41. Difference between `Runnable` vs `Callable` interface?
42. What is the Producer-Consumer problem and how do you handle it?

TOP 75+ JAVA INTERVIEW QUESTIONS EXPERIENCED

Java Performance Optimization & Memory Management

57. How does the delegation model work in Java ClassLoaders?
58. Difference between Stack and Heap memory? What type of data is stored in each?
59. How do you implement multithreading in Java?
60. How would you use multithreading to improve performance in a data processing application?
61. Explain the Spring MVC architecture.
62. How do you handle form validation in Spring MVC?
63. How do `@RestController` and `@RequestMapping` support RESTful web services?
64. How do you handle session management and authentication in Spring Security?
65. How do you resolve merge conflicts in Git?
66. Significance of Maven lifecycles and how do you use them in your project?
67. Difference between `mvn clean install` and `mvn clean package`?
68. How is Mockito used to create mocks in tests?
69. Difference between Mock and Spy in Mockito?

TOP 75+ JAVA INTERVIEW QUESTIONS EXPERIENCED

Kafka & Microservices Scaling

70. Design a **Notification Microservice** that supports different notification types (email, SMS, app). Describe how you would make it **scalable** and **extensible**.
71. Have you worked on Kafka Stream topologies?
72. For reading data from a Kafka topic in Spring Boot, what do you use? Are you using Spring Cloud Stream?
73. When consuming Kafka messages, what features in Spring are useful for reading the data?
74. What is the default message size Kafka can accept?
75. For sending a **15MB message** from Producer to Broker and from Broker to Consumer, what parameters would you configure?
76. What happens if a Kafka message size exceeds the configured limit?
77. What is the replication factor in Kafka?
78. Why do we implement replication factors in Kafka?
79. What is **fault tolerance** in Kafka?
80. Can fault tolerance be implemented using the Kafka replication factor?
